

VRC's Wide Area Cold Spray Nozzle

Part# NZZL0086

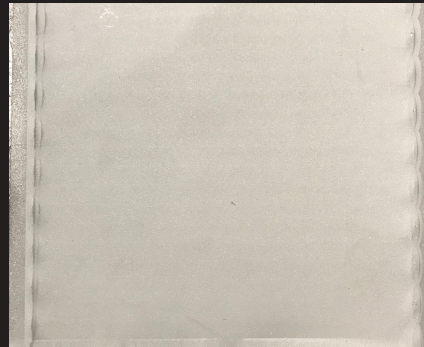

Features

- Increase spray width by approximately 3X
- High feed rate (2X Standard) for powder deposition rate
- Up to 14X decrease in coating time
- Tungsten Carbide

For a 6 x 6 inch sample, 0.25ft², can be covered in 48 seconds compared to 6 minutes with a standard de Laval converging diverging nozzle

Approximately 3X increase in spot size

At least 2X faster more powder due to more efficient distribution of powder in the stream
